THESIS TOPICS FOR SUPERVISION

Miroslav Palanský
IES, Charles University
This version: July 28, 2022

The purpose of this document is to provide a list of thesis topics I am willing to supervise and to help you come up with ideas of your own. Note that I am willing to supervise topics not listed here—I will be happy to discuss any idea. Do not hesitate to approach me in case you wish to discuss one of the below-listed topics as well as your own. You can reach me at miroslav.palansky@gmail.com.

I have a couple of general remarks that may help you make decisions that have to be made before you start writing:

- I strongly recommend writing your thesis in English using LaTeX. Even though you may encounter some problems along the way, it is the easiest way to write a thesis. Plus, mastering LaTeX is a very valuable skill.

- Given the thesis length requirement set by IES, it is often useful to consider splitting your thesis into multiple chapters made up by individual (but related) papers. This will help you to publish your work afterwards more easily, because academic journals usually have an upper limit on word count much smaller than the IES minimal requirement for theses. For inspiration on what that might look like, see for example my Master thesis or that of Tomáš Havránek.

1 Open suggested topics

I currently do not have any open suggested topics, and in the academic year 2022/2023, I unfortunately do not have remaining capacity to supervise theses. Nevertheless, if you'd like to work on topics related to my research area, please do get in touch and we can find a suitable supervisor together, perhaps one of my colleagues from the CORPTAX group.

2 Currently supervised theses
